

Career Objective:

As a dedicated Python Automation Tester with over 3 years of experience in quality assurance and test automation, I am eager to further enhance my skills and contribute to building reliable, high-quality software through automated testing solutions.

Professional Summary:

- Working as a Software Engineer in Msys Technologies Pvt. Ltd, Bangalore with **3 years** of Experience.
- Extensive experience in Quality Control for Web Based Applications.
- Expertise in Test Automation using Selenium with programming language Python
- Demonstrated abilities in writing Test Scenarios, Test Cases, Traceability Matrix, Test Automation Scripts and Test Reports.
- Hands-on experience in continuous integration tools like Git, GitHub, and Jenkins
- Well versed in defect management, by reporting and tracking tools using Jira.
- Hands on experience in testing different layers of the application like UI layer (i.e., Web Services Testing).
- Strong communication and interaction with Clients, Developers, Business Analysts, Managers and Testing teams

Technical Skills:

- Programming Languages: **Python**
- Web Automation Tools: **Selenium, Playwright**
- Frameworks: **Page Object Model**
- Testing Framework: **Pytest**
- IDE: **Visual Studio Code, PyCharm**
- Project Management Tools: **Git, GitHub, Jenkins, Docker, Kubernetes(basics)**
- Operating Systems: **Windows, Linux**

Certifications: Nutanix Certified Professional – Multi-cloud infrastructure (NCP-MCI)

Work/Project Summary:

Project1: Nutanix AOS & PC Validation (Nutanix Cloud Platform - NCP)

Domain: Cloud Infrastructure | **Type:** DR (Disaster Recovery) | **Platform:** Nutanix Cloud Platform (NCP)

Description:

Administered and validated Nutanix **Hyperconverged Infrastructure (HCI)**, including **AOS, Prism Central (PC), and Prism Element (PE)**, with integrated disaster recovery (DR) capabilities. Oversaw the stability of **24-hour regression tests** across **master and release branches** while verifying customer-critical patches to ensure seamless system performance and reliability

Roles and Responsibilities:

- Designed and implemented a **modular, scalable automation framework** using **Python, Selenium, PyTest**, and the **Page Object Model (POM)** to streamline Disaster Recovery testing workflows.
- Automated end-to-end **UI test scenarios** for DR features like **backup scheduling, snapshot validation, and failover/failback operations** in Prism Central.
- Developed Python scripts to **trigger test cases via Prism Central UI** and validated backend operations by analysing system logs, ensuring data consistency post-recovery.
- Integrated test execution into the **CI/CD pipeline using Jenkins**, enabling **scheduled and on-**

demand regression runs with HTML and email report generation.

- Conducted **data-driven testing** using JSON and Excel files to verify DR operations across diverse configurations.
- Created **test data and mock virtual machines (VMs)** using internal Nutanix tools and Prism Element APIs to simulate real-world DR scenarios.
- Verified backup chain integrity and snapshot consistency by analyzing **automation logs, REST API calls**, and backend service responses.
- Logged detailed **defect reports** with reproduction steps, logs, and screenshots in **JIRA**; worked closely with development and SRE teams to triage and fix critical issues.
- Participated in **Agile ceremonies** (sprint planning, stand-ups, retrospectives), contributing to **test strategy reviews**, QA sign-offs, and test plan documentation.

Technologies & Tools: Python, Selenium, PyTest, Git, Jenkins, JIRA, Prism Central, REST APIs, Excel, JSON

Project2: Nutanix SaaS Licensing (Nutanix Cloud Platform - NCP)

Domain: Cloud Infrastructure | **Type:** SaaS | **Platform:** Nutanix Cloud Platform (NCP)

Description:

Nutanix SaaS Licensing is a subscription-based cloud offering that enables users to manage hybrid and multi-cloud infrastructure through a unified control plane. This platform supports self-service provisioning, cost governance, security policies, and operational analytics—abstracting underlying hardware and offering scalable, pay-as-you-go consumption for enterprise workloads.

Roles and Responsibilities:

- Developed and maintained **automated test suites** using **Python with Selenium**, applying **OOP principles** and the **Page Object Model (POM)** to ensure scalability and reusability of scripts.
- Designed and implemented **end-to-end API and GUI automation** test scenarios for validating complex user workflows in the Nutanix SaaS ecosystem.
- Executed and monitored **daily regression test cycles** using Jenkins; analysed failures, **triaged flaky tests**, and **raised defects via JIRA**, following up with developers for timely resolution.
- Validated critical features such as **user licensing, billing metering, and subscription entitlements**, ensuring stability and accuracy across release cycles.
- Contributed to the **test strategy and coverage plans**, increasing test coverage for core features and reducing manual verification efforts.
- Collaborated with cross-functional teams including **developers, DevOps, and DBAs** to ensure test alignment with infrastructure and deployment changes.
- Implemented **data-driven testing** using external data sources (Excel/JSON) to validate multiple input scenarios efficiently.
- Actively participated in **sprint planning, code reviews, and daily stand-ups** as part of the Agile development lifecycle.

Technologies & Tools: Python, Selenium, PyTest, Git, Jenkins, JIRA, Prism Central, REST APIs, Excel, JSON

Educational Qualification: B-Tech in Electronics and communication Engineering in 2019 at AP-IIIT RGUKT RK-VALLEY.
